

## The Cleveland Deburring Machine Company

### CDMC 1000 Series

The CDMC 1000 series is designed to provide an economical solution for deburring a wide variety of gears, sprockets and other parts.

This machine can be provided with a single cutting head or dual cutting heads for simultaneous deburring action. The CDMC cutting heads can be equipped with deburring wheels, carbide rotary files or brushes, depending on the application and desired end result.

Other options include an integrated dust collection system, an auto door, and a touch screen user interface.

This extremely versatile machine was designed to fill the need of anyone looking for a repeatable deburring solution, and it's low cost/fast lead time makes it a great fit for someone looking to upgrade or rebuild their current deburring system.
