

The Cleveland Deburring Machine Company

CDMC 2000

The CDMC 2000 is a flexible, reliable and robust deburring machine designed for applications involving large or heavy parts. Designed to be extremely durable, this machine is supplied with a series of roller bearings to make loading and positioning the part almost effortless.

The machine is capable of processing parts up to 60" in diameter, and up to 2,000 lbs. Equipped with dual cutting heads, it is capable of processing two sides of a gear simultaneously. The part is driven by two drive rollers, and is supported by two idle rollers.

Other standard features include a touch-screen operator interface and two hand start buttons.
